STUDY DAYS OF THE INFN 2020-2022 THREE-YEAR PLAN IN BARI

On 8 and 9 November in Bari, at the premises of the Polytechnic, the study days of INFN's 2020-2022 Three-Year Plan were held, which this year featured the opening address by the Minister for Regional Affairs and Autonomies, Francesco Boccia.

The Three-Year Plan is the event dedicated to the analysis, proposal and discussion of the scientific and other policies of the Institute in which the INFN community always participates in large numbers. In particular, this year's meeting, which was held just a few months after Antonio Zoccoli took over the Presidency of INFN from Fernando Ferroni, revolved around these three key words: vision, strategy and future.

Minister Boccia's keynote was followed by greetings from the local authorities and institutions, at the end of which the proceedings began. The first day was dedicated to scientific topics, including the future European particle physics strategy, research on new physics and quantum technology. The second day focused on two of the main research infrastructures of INFN, the Southern National Laboratories and the Frascati National Laboratories, and the issues of technology applications and transfer, addressed from different perspectives, concluding with a general discussion on the main issues that emerged during the two-day event. ■
